Exterior & Interior Signage • Digital Imaging • Column Covers • Illuminated & Non-illuminated Directories • Custom Fabricated Graphics

2000 Series - R1212 - Directional Unit Tech Series - Metallic painted silver aluminum frame with brush finish aluminum header panel with etched & filled copy & painted aluminum copy strips with VDC letters - Process **(ALB/ALP)**

The 2000 Radius Series

This Product has been designed to fulfill the need for an identification system that can be used for multiple functions. This product will retain its visual integrity and function for virtually any application and maintain flexibility and vandal resistance. Any media placed within the perimeter frame cannot be removed or tampered with unless the removal procedure using a supplied tool is followed. Many choices of materials and finishes are available to ensure compatibility within any architectural environment.

Radius Module Series

The multiple module plaques and directories combine a series of unique plaques into groups of functional units. These series offer interchangeability and flexible formats with excellent vandal resistance. Ideal for any facility with high traffic and abuse potential they also offer a complete flexibility of color, configuration and long-term use. All inserts can be changed without disturbing the frame or wall mounting. All units are available in ADA compliant raised graphics and braille.

2000 Series - R1906 - Anodized satin aluminum frame with photopolymer raised copy & braille for interior use - Size 18"w x 5" h - Process **(PPIN)**

Retainer Frame Sizes

2000 Series - R1515 - Anodized satin aluminum frame with vinyl tackboard & erasable writing surface. - Process **(TK/SP)**

Plaque Changing

All plaques are held firmly in place within the outer frame. The changing process is started by removing a captive set screw that retains the top channel. The plaques can be removed upward from the side channels and replaced or moved. Reversal of the above completes the changing of plaques and with this procedure assures perfect alignment and ease of maintenance. The outer frame is permanently installed and is never removed from the mounting surface after is installed.

Header Panel Information

Header panels are offered in heights as required. The width dimension is determined by the number of plaque modules. A standard divider channel is supplied between plaques and header panel.

Mounting Information

Units are mechanically surface mounted as standard with concealed mounting hardware. Mounting brackets are supplied with each unit. Fabrication drawings indicating all details are provided for approval.

Plaque Removal Information

Information plaques are retained within the channels of the outer frame and are removed by moving them upward and out of their channel. Plaques are completely interchangeable and can be moved to any point within the outer frame when changes occur.

Plaque Materials

See list of available materials on page 2 in addition to the standard .125" thick opaque acrylic or satin matte finish aluminum - either can be coated in custom colors. Size of inserts and copy color: as required
Colors: 24 standard Vomar or custom colors.
